

Impath Networks joins the Physical Security Interoperability Alliance (PSIA)

HALIFAX, NOVA SCOTIA, CANADA, December 20, 2010 - Impath Networks, a leading provider of IP video networking solutions, today announced it has joined the Physical Security Interoperability Alliance (PSIA). The Physical Security Interoperability Alliance is a global consortium of physical security manufacturers and integrators focused on promoting the interoperability of IP-enabled devices across every technology segment of the security industry.

Impath Networks joined the alliance to promote the advanced compatibility of its products with other PSIA supported products, and participate to the future direction of open standards. Impath Networks is a leader in the use of standard-based open architecture design. The company was an early adopter of IP-based video technology, and was one of the first companies to deploy large-scale, mission-critical IP video solutions. Impath's extensive experience working with IP-based video surveillance gives the company unique capabilities in providing a standard open architecture to the design and implementation of physical security solutions.

"We are pleased to welcome Impath Networks to PSIA," said David Bunzel, Executive Director, PSIA. "The company's experience with enterprise-class IP solutions provides a unique perspective and we look forward to working closely with the company as we continue to move toward our goal of developing standards that enable complete IP-system interoperability."

Impath Networks designs and manufactures a suite of digital video encoders and decoders, IP cameras, video recorders (DVR, NVR) systems and Video Management Systems, all supported by numerous integrated security system solutions. Delivering high quality surveillance video to the right people at the right time, Impath has solutions operating in Intelligent Transportation Systems, Commercial Security, Government, Defense, Rapid Transit, Airports/Seaports, Utilities and City/Campus installations around the world.
